

Gabriel Medina

New Orleans, LA • gabrielmedina1@proton.me

Summary

LSU Computer Science graduate and CompTIA Network+ certified technician with hands-on experience in Active Directory administration, system diagnostics, and customer support. Skilled in troubleshooting Windows/Linux environments, managing ticketing systems like ServiceNow, and clearly walking end-users through technical solutions.

Education

Louisiana State University, Baton Rouge, LA

August 2024

- B.S. in Computer Science
- Coursework: Computer Networks, Operating Systems, Database Management

Certifications

- CompTIA Network+

March 2026

Technical Skills

Administration: Jira, ServiceNow, RDP, Active Directory, User/Group Management

Operating Systems & Software: Windows, Windows Server, Linux/Unix, Microsoft 365/Office

Networking: Wireshark, TCP/IP, DNS/DHCP, SSH, Routing, Switching

Programming: Python, JavaScript, SQL, Java, HTML/CSS

Technical Projects

Active Directory & Identity Management Setup

July 2026

- Installed and configured Windows Server as a primary Domain Controller, establishing core network infrastructure including DNS resolution, DHCP scope options, and redundant failover policies.
- Designed a scalable OU hierarchy with RBAC security groups and enforced GPOs for endpoint security and centralized drive/printer mapping.
- Authored PowerShell scripts to automate bulk user account creation, initial password generation, security group assignments, and home directory mapping to streamline administrative workflows.

Home Network Lab

October 2025 - Present

- Built a Proxmox-based homelab hosting and maintaining virtualized Windows and Linux environments, performing routine software updates, system patches, and hardware resource allocation.
- Configured a WireGuard VPN server featuring split-tunneling and strict IP whitelisting to enable secure, encrypted administrative access to internal lab resources.
- Deployed uptime monitoring and alert hooks to track network latency, system resource usage, and service availability and regularly perform network diagnostics using command-line utilities.

Cloud Threat Intelligence & Honeypot Deployment

May 2026

- Provisioned an isolated AWS EC2 Linux server and configured custom security groups and SSH port remapping to safely host a multi-container T-Pot honeypot environment.
- Exported attack logs and system telemetry to a local Splunk SIEM container to analyze real-time malicious traffic, attacker IP origins, and payload behavior.
- Authored threat intelligence reports detailing brute-force attack vectors and cataloged malicious IP ranges to build custom firewall blocklists and proactive security rulesets.
